## WARRENS AUTO SERVICES (PTY) LTD

24 April 2024

Hi Justin

I recently had a client, driving a Toyota Fortuner, that had a problem, of picking up a bad diesel supply on the way back from Durban. There was a high concentration of water, in the diesel, causing the water trap light to stay on, even after the water trap was drained twice, there was clear water that came out each time. But the warning light returned.

After discussing this problem with you, we decided to add 100ml of **Dieselfix** into the tank, and you advised me to fill the tank, change the diesel filter, and drive the vehicle. The water trap light went off and came on 24 hours later, and when I drained it this time there was a mixture of oil and water and particles of oil and gunk that shocked me, as I've never seen this before in twenty years in the motor trade.

The Toyota Fortuner, since the **Dieselfix**, is performing better, the engine is quieter, and there is thankfully no damage to the injectors, and I have one happy customer. **And the water trap Light has stayed off. Proving that the product absorbs the water and has only positive benefits.**

Another client with a 2005 Nissan Hardbody that has 416 000km, gave me feedback this morning, after I used **Dieselfix** the engine is quieter, has better overall performance, and is even starting better as he had a rough start problem on cold start.

**Warrens Auto Services** supports this amazing product and going forward all the clients with diesel vehicles which I service, will be given the opportunity to gain from this product. And I will endorse this product **100%**.

Kind Regards  
Warren Rahme
